

## Software Developer: Role Description

## Software Developer

The successful candidate will be a valued member of our software development team who are responsible for designing, integrating, verifying, and maintaining our solutions to the highest quality and in line with our Customers' requirements.

### The Role

- Writing clean, well-commented, secure and maintainable code in an Agile environment.
- Develop and design the best product offering based on client software requirements and the company's product development strategies.
- Design and create efficient, reusable, intuitive and logical software.
- Assist in the continuous improvement of the software configuration management process.
- Maintain a 'common sense' approach into recognising potential design gaps and providing insight into closing them.
- Work closely with the *Quality Assurance Team* to ensure that all software is fully functional/operational before releasing to Clients.
- Troubleshoot client problems and research and identify cause of reported defects and issues.
- Participate in training and/or customer support activities as required.
- Work effectively with management and staff.

### Role Requirements

- 3+ years of experience with the Microsoft stack
- Experience in C#/VB.NET and ASP.NET & Bootstrap.
- Experience in RESTful API development.
- Experience in MS SQL
- Experience in HTML5 and CSS3.
- Experience in Test Automation.
- Experience in modern JavaScript frameworks (Angular)
- Agile experience.
- Mobile App Development desirable
- 1+ years' experience in AngularJS/Angular desirable
